

dioVision compare image

With deep space and real,
an emotional viewing.

Like a "window to reality".
Works with any picture or
photo (148 x 100 mm).

A new dimension of
print-communication.

More info: www.diovision.de

Please cut out a window here using a cutter knife.

Build-up

Cut out the comparative picture and the
window as shown with a cutter knife.

Fold along the broken lines. After this please
fold back the motive and the glued join.
Then attach together the dioVision.

Curve it know with light pressure on the sides,
so that you get a cavity between motive
and viewing window. Illuminate it, with a
desk lamp for example or hold it up
to the daylight.

Have fun while watching dioVision.
